## *KKSP expands Multi-Turn Precision Industries in Monterrey Mexico*

---

As part of the KKSP and our Multi-Turn Division's continued mission to improve service and meet growing customer demand for localized sourcing, we are more than doubling the size of our operation in Monterrey, Mexico.

Our new facility is more than 52,000 square feet in size and located just five miles from our current Monterrey location. We are well underway building out the facility and are targeting project completion in the fourth quarter of 2015 with all equipment moved and fully operational by January 2016.

We will be utilizing all of our existing machines, operators, raw material suppliers, and production and management systems in our new location and once complete, the new facility will allow us to significantly grow and broaden our machining capabilities over time to increase the capacity and range of services we are able to offer our customers.

As is the case for all of our facilities, the Multi-Turn facility will remain ISO 9001, TS 16949, and ISO 14001 certified.

We are delighted to announce this significant expansion and the step it represents in our ongoing commitment to invest in the people, equipment and facilities necessary to provide world-class service and quality to our customers.
